

# CoreArmor Protect

## Proactive Cybersecurity and Real Expertise, Around the Clock

CoreArmor Protect is a fully managed cybersecurity solution – designed to detect, contain, and stop threats before they disrupt your business. It pairs 24/7 SOC coverage with expert-led response and advanced threat tools to keep your defenses active and your leadership informed.

From vulnerability management to threat hunting and deception tech, CoreArmor Protect surrounds your business with active defense, while giving you a clear view of what's happening and why it matters.

## What does CoreArmor Protect bring to your business?

### 24x7x365 Threat Detection & Response

Our managed XDR platform delivers nonstop monitoring, proactive threat hunting, and automated containment – so nothing slips through the cracks.

### Expert-Driven Security Operations

We go beyond tools and dashboards. You get real security professionals tracking, tuning, and responding – backed by advanced threat intel and proven response playbooks.

### Posture Hardening Over Time

Annual pen testing, real-time change monitoring, and vulnerability management continuously improve your security maturity – not just maintain the status quo.

### Business-Aligned Visibility

Security that's easy to explain. Baseline assessments, executive reporting, and monthly service reviews help you show measurable progress to your board and stakeholders.

### Optional Enhancements for Your Risk Profile

Add services like SSPM, third-party risk management, or incident response table-top exercises to meet your industry's unique needs.

## → What sets CoreArmor Protect apart?

Some security tools only alert you. Others only react. CoreArmor Protect does both – detecting and containing threats while proactively improving your posture, visibility, and resilience. It's not a product. It's a security program delivered by real experts who care about your business outcomes.
